The background is a dark, charcoal grey surface with a fine, grainy texture. A prominent, irregular, light-colored crack or crease runs diagonally from the left side towards the bottom right corner. The crack is jagged and appears to be a physical tear or a deep crease in the material.

The background of the entire image is a close-up, high-resolution photograph of a wooden surface. It features a complex pattern of horizontal wood grain lines, with several prominent knots and swirls that add depth and texture. The color palette is a range of browns, from light tan and beige to deep, dark chocolate and near-black tones, creating a rich, organic feel.

LAYING INSTALLATION

PRIOR TO INSTALLATION

The surface to be paved to be flat, and free from substance: Dust, impermeable products, soluble salts, and all those products which are incompatible with adhesive material. In case of crumbling of the base, it must be removed till getting a firm surface

LAYING

Spending on the surface using a dentate trowel, whose size will vary from 6x6mm. to 9x9mm. Depending on the size and manufacturer's instructions.

LEVELING

Hit the tile with a rubber hammer (from the center to the edges of the tiles). In order to distribute and level the tile.

SPACING

Tiles must be paved leaving a gap between them which will vary from 1mm. to 3mm. Joints for placing them

JOINING

Joining has to be carried out using a rubber palette knife, which will be used to compress material with backwards and forwards movements. In this way. Joints will be field to over-flowing. Anyhow please follow the manufacturer's introduction in how to use the product-drying time, removing leftovers, and cleaning

AFTER LAYING

Once the work has been finished. There are leftovers of the employed materials which have to be removed as soon as possible (cement, joints material, etc...) For this, we recommended using a cement remover or any others acid based descaling product.

MAINTENANCE TIPS

A Beautiful floor is considered by many as the most vital element of construction. it's what any visitor sees first. And most importantly, once laid, a floor seldom changed. It must therefore not only be beautiful but also retain it's beauty for years to come.

But floors are subject to the daily grind & rigorous of foot traffic and to stains, ink stains, grease stains, etc. Even the best of the tiles will stain if not maintained. Fortunately the situation is not completely futile, we at **GVT / PGVT** in tandem with leading research laboratories have found solutions for these irritants.

GVT / PGVT floor tiles are tough and are manufactured to exacting European norms and have been tasted to withstand staining as per the EN & IS Norms. Just know the right cleaning methods and your floor can look as spotless years from now as they do today.

Note :

Colours shown are as accurate as the limitations of the printing process will allow. Prospective customers are advised to inspect a sample of the tile before ordering. Every effort has been made to ensure the accuracy of the information given. However, the company reserves the right to change the specifications without prior notice. Sometimes variations in shade or size being inherent to ceramic industry may occur. Before fixing, we advice you to follow the fixing instruction on the cartons of the tiles as no responsibility can be accepted by the company once the tiles have been fixed.

Highly non-porous

Resistant to detergents

Easy to clean
and maintain

Resistant to chemicals

Suitable for contact
with food

Friction coefficient

Water resistant
(water absorption
0.1% average value)
